

Partnering with a founding school — *how it works*

Teaching is the job. Paperwork isn't. — The step-by-step, from first call to running partner.

PHASE 0

0 Qualify — before anyone travels

1. School reaches out, or we shortlist and call. One conversation with the **decision-maker** (principal / correspondent).
2. Learn their week: how correction works today, who sets papers, how attendance is kept, sections × students × exams per term.
3. Name a **champion teacher** who'll co-own the pilot in the staff room.
4. Ask them to bring real paper to the demo: **one class's answer sheets from a real exam**, that exam's question paper and marking scheme, and a photo of the attendance register.

Ready when: a demo date, a named champion, real paper on its way.

PHASE 1

1 The demo — their school, not a sample

1. Their school is set up in the portal beforehand — real class names, their subjects, one section.
2. Photograph **their answer sheets live**; marks come back on their marking scheme. The teacher reviews, adjusts and presses approve **themselves**.
3. Draft a question paper for a chapter **they** name. Scan their attendance register.
4. Run the savings arithmetic on their numbers, live. Leave the one-page feature sheet behind.

Ready when: the school asks about pricing — or tells us why not.

PHASE 2

2 Pilot agreement

1. Scope: 2–3 sections or one department to start. Attendance first (live today); evaluation lands the punch.
2. Pricing: **per enrolled student, set together** in the founding window, pro-rated to the academic year. The founding rate stays theirs.
3. Data terms in writing: the school's data is scoped to the school's account, never sold or shared — and what happens to it if the pilot ends.
4. Two names on each side: their champion + office point-person; our founder-in-charge.

Ready when: signed pilot terms, a start date inside two weeks.

PHASE 3

3 School setup — office first

1. Admin portal populated together, in one sitting: classes, sections, students with parent contacts, teachers on school email, subjects.
2. Subject books attached — they flow to every department teacher's library and tune what gets drafted.
3. Teacher-to-class allotments entered, or worked out with the allotment automation.
4. Existing records migrated **by us** — never homework for the school.

Ready when: every teacher logs in and sees their own classes.

PHASE 4

4 Teachers on — one staff-room hour

1. One session, champion co-hosting. Every teacher does three things **with their own hands**: drafts a note with the copilot, sets one homework, drafts one question paper for their next test.
2. The library explained: private by default; share a note and it's on every teacher's shelf, scoped to the school's email.
3. A direct line stays open for the pilot — questions answered by a founder, same day.

Ready when: every pilot teacher has one artifact of their own in their library.

PHASE 5

5 The first live loop — the proof

1. The next **scheduled** exam in a pilot section — the school's normal calendar, never a staged "pilot exam".
2. Paper drafted in Paperhint, edited and approved by the teacher, printed and written on paper as always.
3. Sheets photographed same day; marks reviewed and approved; results land on each student's record.
4. Attendance scanning runs daily in pilot sections throughout. We're on-site or on-call for the first evaluation day.

Ready when: one full exam cycle — set, written, marked, recorded — approved at every step. This is when the school decides.

PHASE 6

6 Parents on

1. Triggers switched on for pilot sections: homework on assignment, absences same-day, marks when the teacher shares them.
2. The office sends a one-time note to parents — we draft it — so the first notification isn't a surprise.

Ready when: a week of parent updates with zero office effort.

PHASE 7

7 Custom modules — the partnership dividend

1. Standing rule: what the staff asks for lands on the roadmap — **the founding school's way of working shapes what every school gets**.
2. Asks triaged monthly with the champion and the office: config (done now) · a module worth building (roadmap, their name on it) · out of scope (said plainly).
3. Ecosystem work: the applications the school already runs, brought into one place — scoped case by case.

No exit — this loop **is** the partnership.

PHASE 8

8 Review, rollover, expansion

1. End of term: the savings arithmetic re-run on actuals with the principal — their marking hours, their paper evenings.
2. Expansion to more sections and departments at the same founding rate.
3. Year end: batch migration — classes promoted in one move, the year archived, subjects and books carried forward.
4. Testimonials and referrals asked for only after Phase 5 has run twice.

The two rules that govern *all* of it

Their paper, their approval. Nothing is marked, sent or filed without a teacher or the office signing off.

Never promise past what ships. Analytics, dashboards, digital exams — not until they're real.
