

Every teacher deserves a second pair of *hands*

Teaching is the job. Paperwork isn't. — What Paperhint does, in one page.

AT THE TEACHER'S DESK

- **Answer-sheet evaluation** — photograph sheets with the app; every answer checked against its question, scored on your rubric the same way for every student; you review, adjust, approve; results land on each student's record.
- **Question papers** — chapters, weightage, difficulty in; paper, blueprint and answer key out, drafted for the syllabus, tuned by your notes and subject books.
- **Homework & assignments** — drafted for what you taught today; parents notified the moment it's assigned.
- **Teaching notes** — drafted for the syllabus, rewritten simpler for a weaker section, extended with diagrams, or pasted in from your own work.
- **Teacher's copilot** — a chat at the teacher's desk for notes and teaching tasks in plain language.
- **Personal library** — everything a teacher makes lands in their own private repository.
- **Shared library** — share a note and it's on every teacher's shelf, scoped to the school's email.

IN THE SCHOOL OFFICE

- **Attendance scanning** — the paper register you already use, scanned in; absences reach parents same-day. (*Live today.*)
- **Resource planning & allotment** — automation fixes who teaches which class/section, one clean interface, an office copilot for changes.
- **Admin portal** — classes, sections, students, teachers, subjects in one place.
- **Batch migration** — promote a whole class to the next grade in one move.
- **Subjects & books** — attached books flow to every department teacher's library.

AROUND THE CLASSROOM

- **Student records** — every evaluation recorded, exam over exam.
- **Parent notifications** — homework, marks, and absences, the moment they happen.
