

Paperhint — Module List

The product in one line: **an AI ecosystem that makes the whole school work faster** — an assistant for every role, so teachers teach more and offices run themselves. Two roles today (Teacher, Admin); the destination is the digital school, with committee, student and parent roles joining the same ecosystem later. Paper-work reduction is a side effect, not the pitch.

Tags: **DONE** live in app today · **TWEAK** built, needs change · **MOVE** built, wrong place / wrong scope · **BUILD** not started. Statuses verified against the live app (both roles), 3 Sept 2026.

Teacher modules

Ordered as her working day runs.

T1 · My Schedule (My Timetable / My Day)

BUILD

DESCRIPTION	The teacher's own schedule — today and the full week: section, subject and room for every class she takes, with a reminder 10 minutes before each class starts. Slots are FIXED but ALTERABLE : a slot of mine can be filled by a colleague, and I can fill someone else's — alterations show inline on the schedule. Periods auto-block her calendar with one-tap Google/Outlook sync (one-way: Paperhint is the source of truth).
ACTIONS	Yes — view today / week, open a period, sync calendar, 10-min pre-class reminder (configurable); request a fill for my slot; see alterations.
DEPENDS ON	A2 School Calendar → A3 Timetable (the school timetable fills and blocks her schedule).
NOTE	<i>Becomes the top of the teacher Home. The reminder doubles as the nudge to log the previous session.</i>

T2 · Period Exchange — Borrow & Fill

BUILD

DESCRIPTION	The request engine over the timetable, in both directions. BORROW : every class module shows that class's timetable; a teacher requests to borrow another teacher's period there (she needs an extra slot with that class). FILL MY SPOT : from My Day she asks a colleague to take her period — leave, or any reason. Requests are accepted or declined; every accepted exchange updates both teachers' schedules, calendars and reminders, and the office sees all alterations.
ACTIONS	Yes — request a borrow from a class timetable; request fill-my-spot; accept / decline incoming requests; view exchange history.
DEPENDS ON	A3 Timetable + T1 My Schedule.
NOTE	<i>LEAVE IS CLUBBED HERE: going on leave raises fill requests for all affected periods; whatever stays unfilled falls to the office (A10). This module is why the class page needs a class-timetable view.</i>

T3 · Ask Hint (assistant)

DONE

DESCRIPTION	Her assistant everywhere: prepares notes, answers portion queries from her own sources, works through tasks in plain language, scoped per class.
ACTIONS	Yes — chat, generate, save to library.
NOTE	<i>Extend: capture the Period Log (T4) through this same chat.</i>

T4 · Period Log

BUILD

DESCRIPTION	After each class is taken, the teacher logs her session for that day by telling Hint what and how she did; stored as a structured record (class, topic reached, status, student mentions, follow-ups) — never as loose chat.
ACTIONS	Yes — log by talking to Hint or one-tap confirm of the planned topic; edit later.
DEPENDS ON	T1 My Schedule (knows which period just ended) + T3 Ask Hint (capture surface).
NOTE	<i>The spine module: the log is what recap continues from, and what portion-completion stats and the teacher's KPI are computed from. On an exchanged period, the filling teacher logs — so the record never breaks.</i>

T5 · Syllabus Tracker

BUILD

DESCRIPTION	The portion as a chapter checklist per class: where each section stands, pace against the term deadline; chapter completion is selected/confirmed from the teacher's logs.
ACTIONS	Yes — view, adjust, set deadlines (progress ticks itself from logs).
DEPENDS ON	T4 Period Log (completions come from it).
NOTE	<i>Add as the fifth step of the class pipeline: Knowledge → Exams → Grading → Results → Portion.</i>

T6 · Portion Completion — Teacher KPI

BUILD

DESCRIPTION	The teacher's own scoreboard: chapters completed per class vs plan, computed from her period logs. A teacher's KPI is completing chapters — this makes that visible to her, per class and per term.
ACTIONS	Yes — view own stats per class/term; drill into the logs behind a number.
DEPENDS ON	T4 Period Log + T5 Syllabus Tracker.
NOTE	<i>Essential teacher module. The same numbers aggregate school-wide into the admin KPI dashboard (A14).</i>

T7 · Recap Card

BUILD

DESCRIPTION	Auto-generated period opener used to continue the class: where this section stopped last time, and who was absent and missed it — including when the last period was taken by a filling teacher.
ACTIONS	No — read-only, generated from the period log.
DEPENDS ON	T4 Period Log + T8 Attendance.
NOTE	<i>Shows on the My Day period card.</i>

T8 · Attendance

TWEAK

DESCRIPTION	The day's roll — scan the paper register the school already keeps, or mark in-app; absences notify parents the same day.
ACTIONS	Yes — scan / manual mark, review, resend a notification.
NOTE	<i>Scan flow exists on mobile; surface it in the web app on the period card.</i>

T9 · Teaching Notes

TWEAK

DESCRIPTION	Notes drafted for the chapter, rewritten simpler for a weaker section or extended with diagrams; edited and saved to her library.
ACTIONS	Yes — generate, edit, save, share.
DEPENDS ON	T10 Knowledge sources; T5 tracker suggests which chapter is next.
NOTE	<i>Works only through Ask Hint chat today; promote to a first-class module with a small editor.</i>

T10 · Knowledge (class sources)

DONE

DESCRIPTION	Textbooks and notes attached to each class, analyzed so Hint can generate questions and answer from them — her knowledge source at the desk.
ACTIONS	Yes — upload, analyze, mark private/public.

T11 · Personal & Shared Library

DONE

DESCRIPTION	Everything she makes lands in her own repository; one share puts it on the school-wide shelf.
ACTIONS	Yes — save, share, browse, reuse.

T12 · Homework & Assignments

BUILD

DESCRIPTION	Homework drafted from what was taught today; assigned at class scale; parents notified on assignment; submissions tracked and evaluated without the manual grind.
ACTIONS	Yes — draft, assign, track submissions, evaluate (reuses Grading).
DEPENDS ON	T4 Period Log ('what was taught today' comes from it).

T13 · Question Papers

DONE

DESCRIPTION	Pick chapters, weightage, difficulty — paper, blueprint and answer key drafted from her sources; or upload her own.
ACTIONS	Yes — generate, edit, upload.
DEPENDS ON	T10 Knowledge sources.

T14 · Grading (answer sheets)

DONE

DESCRIPTION	Photograph answer sheets; every answer scored against the rubric the same way for every student; she reviews the doubtful ones.
ACTIONS	Yes — upload sheets, review, approve.

T15 · Results (marks & records)

DONE

DESCRIPTION	Marks per student, per exam, in one grid; every result builds the student's record over time. Each student profile also shows their report card (A13) to the teacher.
ACTIONS	Yes — view, adjust, publish (parents notified).
DEPENDS ON	T14 Grading.

T16 · Students (in teacher app)

[MOVE](#)

DESCRIPTION	Today the teacher app shows the full school directory (all 120 students).
ACTIONS	View only.
NOTE	<i>Rescope to her own classes — a class roster; student profile shows record + report card. The full directory belongs to Admin (A6).</i>

T17 · Teachers (in teacher app)

[MOVE](#)

DESCRIPTION	Today the teacher app shows the full staff directory.
ACTIONS	View only.
NOTE	<i>Move to Admin (A7). A slim 'colleagues' view returns WITH Period Exchange (T2) — borrowing and fill requests need to see who teaches what.</i>

Teacher modules — Phase 2

Same shape, deliberately after the core day loop ships.

P2-1 · Classwork / Quick Quiz

[BUILD](#)

DESCRIPTION	Short slips or oral rounds generated from today's topic; scores feed the student record between exams.
ACTIONS	Yes — generate, record scores.
DEPENDS ON	T4 Period Log (today's topic).

P2-2 · PTM One-pager

[BUILD](#)

DESCRIPTION	Per-student summary auto-compiled from marks, attendance and period-log observations for parent meetings.
ACTIONS	Yes — generate, print / share.
DEPENDS ON	T15 Results + T8 Attendance + T4 Period Log.

P2-3 · Remedial Follow-up

[BUILD](#)

DESCRIPTION	Students weak on a topic surfaced after grading; remedial notes sent in one tap.
ACTIONS	Yes — view list, send notes.
DEPENDS ON	T14 Grading + T15 Results.
NOTE	<i>Can begin as an Ask Hint capability.</i>

Admin modules

Ordered as the office sets up and runs the school.

A1 · School Setup & Academic Year

TWEAK

DESCRIPTION	School profile; open and close an academic year. A batch tag (2025–26) exists on grades today but there is no year module.
ACTIONS	Yes — configure school, open / close year.
NOTE	<i>Promote the batch tag into a real academic-year module; everything below dates from it.</i>

A2 · School Calendar

BUILD

DESCRIPTION	Terms, holidays, events and exam windows in one calendar every other module reads dates from. Needed before the timetable can exist.
ACTIONS	Yes — add / edit entries, publish.
DEPENDS ON	A1 Academic year.

A3 · Timetable

BUILD

DESCRIPTION	The period grid per class and section; hard clash-blocking on teacher and room; publishes every teacher's periods to her synced calendar automatically — this is what blocks teacher calendars after which each taken class gets logged.
ACTIONS	Yes — build grid, edit, publish.
DEPENDS ON	A2 School Calendar + A8 Allotments.
NOTE	<i>Group with Allotments (A8). Each CLASS MODULE shows its class timetable — the surface teachers borrow periods from. Unlocks T1, T2, T4, A10.</i>

A4 · Classes & Sections

DONE

DESCRIPTION	Grades with sections, subject sets (core + second-language electives), student strength, batch tag.
ACTIONS	Yes — add classroom, configure subjects, archive.

A5 · Subjects & Books

DONE

DESCRIPTION	Subjects per grade; attached books and materials flow to every teacher's library in that department.
ACTIONS	Yes — add subject, attach materials.

A6 · Students

DONE

DESCRIPTION	Admissions and profiles — admission/register numbers, contacts; section moves and transfers; the school-wide directory.
ACTIONS	Yes — add students, edit, transfer.

A7 · Teachers

DONE

DESCRIPTION	Staff onboarding and directory — departments, roles, joining, active status.
ACTIONS	Yes — add teacher, edit, deactivate.

A8 · Allotments (staffing)

DONE

DESCRIPTION	Who teaches which subject in which section, per grade; staffing gaps flagged on the admin Home ('Needs a look').
ACTIONS	Yes — assign, swap, release.
NOTE	<i>Add one school-wide staffing board view when the Timetable lands.</i>

A9 · Attendance Oversight

TWEAK

DESCRIPTION	The day's roll across the school; absences dispatched to parents; registers that haven't come in are visible.
ACTIONS	Yes — view day, chase missing registers, resend.
NOTE	<i>The scan flow exists on mobile; needs a web oversight surface.</i>

A10 · Leave & Substitution (office view)

BUILD

DESCRIPTION	The office side of Period Exchange: approve leave, watch all alterations, and cover the gaps — for any period no colleague filled, free teachers are suggested and a cover assigned; staff and parents informed, calendars update themselves.
ACTIONS	Yes — approve leave, view all exchanges/alterations, assign cover for unfilled periods.
DEPENDS ON	A3 Timetable + T2 Period Exchange.
NOTE	<i>Teacher-to-teacher fills (T2) resolve most gaps; this module is the oversight and the fallback.</i>

A11 · Notifications & Circulars

BUILD

DESCRIPTION	One place to send school-wide or targeted messages to parents and staff — replaces WhatsApp-group forwarding. Homework, absence and marks notifications already ride these rails automatically.
ACTIONS	Yes — compose, target, send, see delivery.

A12 · Exam Manager

BUILD

DESCRIPTION	Schedule an exam across classes on the calendar; question papers and grading link to it; results publish in one action.
ACTIONS	Yes — schedule, link papers/grading, publish results.
DEPENDS ON	A2 School Calendar + T13 Question Papers + T14 Grading.
NOTE	<i>Teacher-level exams exist today; this is the school-level orchestration over them.</i>

A13 · Report Cards

BUILD

DESCRIPTION	Printable term report card per student, compiled from the records that already exist. Also surfaces inside each student's profile — visible to teachers in their class rosters, not only to admin.
ACTIONS	Yes — generate, review, print / share.
DEPENDS ON	T15 Results + T8 Attendance.

A14 · Reports & KPI Dashboard

BUILD

DESCRIPTION	The general KPI dashboard: school performance in one place — class scores, attendance trends, teacher chapter-completion KPIs aggregated from period logs (T5), pending work — exportable for management. Ends the marks-into-Excel ritual.
ACTIONS	Yes — view, filter, export.
DEPENDS ON	T4 Period Log + T6 Teacher KPI + T15 Results + A9 Attendance.

A15 · Batch Migration

TWEAK

DESCRIPTION	Promote whole classes to the next grade in one move at year end; absorb the fresh batch cleanly.
ACTIONS	Yes — run migration, review, confirm.
NOTE	<i>The batch model exists; the migration flow itself needs building and verifying.</i>

A16 · Ask Hint (office assistant)

TWEAK

DESCRIPTION	Plain-language assistant over admin work — 'move Ramya to 7B', 'who can cover 8A Science on Friday?'.
ACTIONS	Yes — chat-driven actions over all admin modules.
NOTE	<i>Present in the nav; wire it to each admin action as it lands.</i>

A17 · Knowledge & Shared Libraries

DONE

DESCRIPTION	School-wide curation of the sources every teacher draws from — the school builds its knowledge once, every teacher benefits.
ACTIONS	Yes — upload, organize, share.

Shared platform (under both roles)

Notifications engine — the parent/staff rails every module publishes to. · **Calendar sync** — per-teacher feeds, one-way out. · **Roles & permissions** — one shell, role-gated modules. · **Data import** — CSV of students/teachers to onboard a school in an afternoon.

Future roles (direction, not for build now)

Committee member — curates syllabus structure, rubrics and teaching methods for independent schools. · **Student portal** — an AI study companion over the student's own class notes and logs. · **Parent portal** — beyond notifications: the child's picture in one place. Every new module above should be built so these roles can plug into the same data later — that's the digital school.
